

FLOW SAFE EQUIPMENT CC

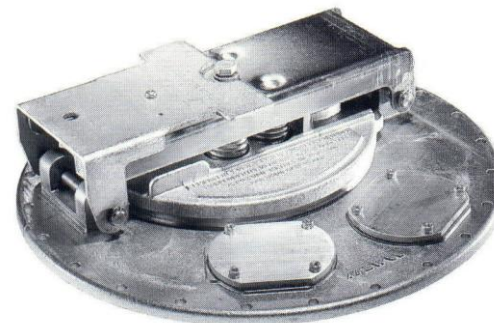

FUEL TANKER EQUIPMENT

A range of Tanker Equipment is available from various manufacturers.

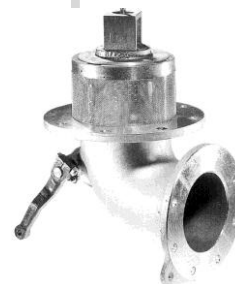

The "Oval" type manhole cover is commonly used on fuel tankers in South Africa and has a built in pressure vacuum vent. It is held in place with "hook lugs" inside the neck ring

The "Round" manhole cover is commonly used on fuel tankers north of South Africa and has a built in pressure vacuum vent. It is held in place by bolts on the base plate. It has space for two pieces of ancillary equipment

A range of "mechanical" emergency valves are available all fitted with Viton seals as standard

The range of emergency valves, both mechanically and pneumatically operated are available.
